

JDScience BTEC Health and Social Care Unit 1 Set A

Original JDScience exam-style practice. Written for BTEC Level 3 Health and Social Care (2016) topics. Not an official Pearson past paper.

Answer all questions. Use the case studies. The marks for each part are shown in brackets.

Time: 1 hour 30 minutes · **Total marks:** 90

Question 1 · 22 marks

Aisha is 9 months old. She lives with her mother, Farah, in a first-floor flat. Farah works evenings in a supermarket. Aisha's grandmother looks after her at night. Aisha can sit without support, reach for toys and babbles "mama". She becomes distressed when Farah leaves for work and settles when her grandmother sings to her.

When Aisha is 7 years old she starts Year 3. She can ride a scooter, write her name and has two close friends. She sometimes has tantrums if she loses a game.

(a) Identify two physical developments expected in infancy.

[2]

.....

.....

.....

(b) Describe two intellectual developments shown by Aisha at 9 months.

[4]

.....

Question 2 · 22 marks

Callum is 15. He has grown 12 cm in a year, his voice has broken and he has acne. He argues with his dad about going out, spends long periods on his phone and has joined a football team. His predicted grades have dropped. He tells the school nurse he feels “not good enough” compared with friends.

(a) Identify two physical changes of puberty in adolescent males.

[2]

(b) Outline two intellectual changes that may occur in adolescence.

[4]

(c) Explain two ways hormonal changes may affect Callum’s emotional development.

[6]

(d) Evaluate the influence of peers on Callum’s social and intellectual development.

[10]

Question 3 • 22 marks

Noah and Ellis are identical twins, aged 11. They live with their father after their parents separated last year. Noah has asthma. Ellis does not. The family has moved to a smaller house near a busy road. Their father works two jobs. Both boys still attend the same primary school and see their mother every other weekend.

(a) Define the nature–nurture debate in human development.

[2]

(b) Describe two genetic or biological factors that may affect Noah’s development.

[4]

(c) Explain how two environmental or economic factors may affect the twins' development.

[6]

(d) Assess the likely combined effects of these factors on the twins' emotional development.

[10]

Question 4 · 24 marks

Doreen Hale is 78. She lives alone since her husband died 18 months ago. She has osteoarthritis in both knees, wears hearing aids and has started to forget appointments. She used to run the lunch club at the community centre. Her daughter wants her to consider extra support at home.

(a) Identify two physical effects of ageing.

[2]

(b) Describe two intellectual changes that may occur in later adulthood.

[4]

(c) Explain how Doreen's social development may be affected by bereavement and reduced mobility.

[6]

(d) Discuss how health and social care services could support Doreen's development in later adulthood.

[12]
