

JDScience BTEC Health and Social Care Unit 1 Set C

Original JDScience exam-style practice. Written for BTEC Level 3 Health and Social Care (2016) topics. Not an official Pearson past paper.

Answer all questions. Use the case studies. The marks for each part are shown in brackets.

Time: 1 hour 30 minutes · **Total marks:** 90

Question 1 · 26 marks

Sophie is 16 and 28 weeks pregnant. She lives with her mum. She has stopped attending college three days a week because of nausea and tiredness. She wants to keep the baby. Her friends have been less in touch. The midwife has given her information about antenatal classes and college support.

(a) Identify two physical developments that occur during pregnancy for the mother. [2]

(b) Describe two intellectual effects that unexpected pregnancy may have on an adolescent. [4]

(c) Explain how Sophie's emotional and social development may be affected. [6]

(d) Discuss how nature and nurture both influence the unborn baby's development in this case. [14]

Question 2 · 22 marks

Mr Idris is 64. He had a stroke three months ago. His right arm is weaker, his speech is slower and he feels low. He was a bus driver. His partner has reduced her hours to help him. He has started physiotherapy and a stroke group.

(a) Identify two physical effects of a stroke. [2]

(b) Describe two intellectual or communication changes Mr Idris may experience. [4]

(c) Explain how this life event may affect Mr Idris’s emotional development. [6]

(d) Evaluate the support available to promote Mr Idris’s development after the stroke. [10]

Question 3 · 20 marks

The Holmes and Rahe Social Readjustment Rating Scale lists life events that may cause stress. Amira, 33, has in one year: got married, moved city for work, become pregnant and had a bereavement in her extended family. She is sleeping poorly.

(a) Identify two examples of expected life events. [2]

(b) Outline two unexpected life events. [4]

(c) Explain how a cluster of life events may affect Amira's physical and emotional development.

[6]

(d) Discuss ways Amira could be supported to reduce the negative effects of these events.

[8]

Question 4 · 22 marks

A nursery reports on two children aged 18 months. Hanna walks confidently, uses 20 words and waves goodbye. Yusuf has low muscle tone, sits with support and uses a few sounds. Yusuf has weekly physiotherapy. Both children have attentive parents.

(a) Identify two gross motor skills expected by 18 months.

[2]

(b) Describe two fine motor skills expected in infancy or early toddlerhood.

[4]

(c) Explain why children of the same age may show different patterns of development.

[6]

(d) Assess how early intervention could affect Yusuf's later development.

[10]
